Puzzle 121

Across:

- 1) The same when reversed. The sum of the digits is 24.
- 5) See 4 down.
- 6) A multiple of 19.
- 7) The sum of the digits is less than the sum of the digits of 10 across.
- 8) An even number. The sum of the digits is 18.
- 10) See 7 across.
- 11) The digits are all odd.

Down:

- 2) Each digit is greater than the one before.
- 3) A factor of the last 2 digits of 11 across. (A factor is one of the numbers which are multiplied together to give this number. For example, 3 and 5 are factors of 15).
- 4) A multiple of the square of 5 across.
- 6) A perfect cube. (The cube of a number that is the sum of its divisors including 1).
- 7) The first 3 digits of 2 down rearranged.
- 9) A multiple of the number formed by the first and last digits of 2 down.

Puzzle 137

Each cell contains a single digit. Zero is not allowed. Here are the clues.

Across:

- 1) The sum of the digits is 12.
- 3) A prime number (See explanation below).
- 5) Each digit is greater than the one before.
- 7) The digits are all even and different. They are either in ascending or descending order.
- 8) The digits are all odd and all different.
- 9) The sum of the digits is less than the sum of the digits of 1 across.
- 10) A multiple of 2 primes.

Down:

- 1) A multiple of the cube root of 6 down.
- 2) The sum of the digits is 24.
- 3) The square of a number followed by the number itself.
- 4) The same when reversed.
- 6) A perfect cube or rather the cube of a perfect number. (See below).
- 8) Even number.

A prime number is a number that has no factors. It is only divisible by itself and by 1. For example, 13 and 23 are prime since they have no factors whereas 24 is not a prime since it can be divided by 2, 3, 6, 12 or 18.
